

1. (amended) A display apparatus having a display screen, comprising:
a stacked film attached to a front surface of the display screen, said stacked film comprising in sequence a base layer, a hard coat layer, a conductive film layer, and a dielectric film layer; and
a conductive tape including a conductive base and a conductive sticky layer;
wherein said conductive sticky layer has a specific electrical resistance; and
one end of said conductive tape is stuck on said dielectric film via said conductive sticky layer and the other end of said conductive tape is electrically grounded.

Please insert new claim 7 as follows:

7. (New) A display apparatus having a display screen, comprising:
a stacked film attached to a front surface of the display screen, said stacked film consisting in sequence a base layer, a hard coat layer, a conductive film layer, and a dielectric film layer; and
a conductive tape including a conductive base and a conductive sticky layer;
wherein said conductive sticky layer has a specific electrical resistance; and
one end of said conductive tape is stuck on said dielectric film via said conductive sticky layer and the other end of said conductive tape is electrically grounded.

REMARKS/ARGUMENTS

This is in full and timely response to the non-final Office Action mailed September 11, 2002, submitted concurrently with a Petition for a one month extension of time. By this amendment, claim 1 was amended, and claim 7 was added. Claim 1 to limit the sequence of the stacked film. Support for this amendment can be found variously throughout the specification, for example, Fig. 4. New claim 7 is similar to amended claim 1, and limits the components of the stacked film. Support for new claim 7 can be found variously throughout the specification, for example, Fig. 4. No new matter was added. Accordingly, claims 1-7 are pending in this application, with claims 1 and 7 being independent.
